

AI-Powered Compliance, Governance & Institutional Intelligence

Collabspace unifies discovery, compliance automation, AI-powered enrichment, workflow intelligence, and physical records modernization into one secure ecosystem built for mission-critical environments.

Why It Matters

Infrastructure stores data. Collabspace makes it defensible.

Collabspace transforms fragmented information environments into a unified governance ecosystem powered by AI-driven discovery, automated compliance, defensible workflows, and secure operational intelligence

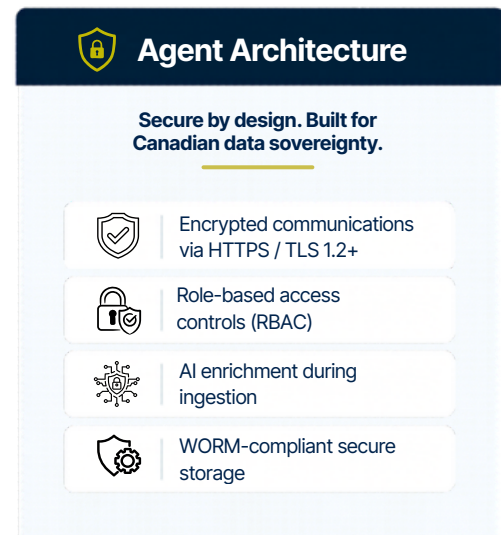

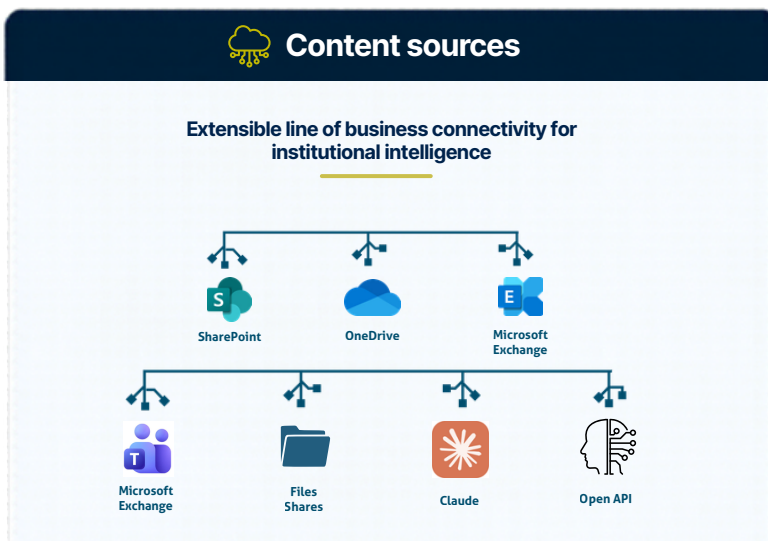

How It Works

From Ingestion to Defensible Governance

Built-in AI enrichment, security, governance automation, and investigative workflows across the complete information lifecycle.

Enterprise Connections Ecosystem

Purpose-Built features for every regulated industry

Purpose-built for regulated and mission-critical environments. Wherever compliance, risk, and public trust are non-negotiable- Collabspace delivers

Federal, State & Local Government

Supports FOIA, records management, public transparency, and compliance initiatives.

FOIA/FOI Case Management: End-to-end request tracking, review, and response workflows.

Physical Records Modernization: Connect legacy paper archives with modern digital governance.

Energy & Utilities

Supports operational records, compliance documentation, and infrastructure governance.

Multi-Source Connectors: Unify information across enterprise systems and repositories.

eDiscovery for Litigation: Accelerate litigation, regulatory reviews, and investigations.

Financial Services

Built for regulated records, compliance oversight, and audit readiness.

eDiscovery Cost Reduction: Reduce manual review efforts through AI-powered discovery.

Regulatory Audit Trails: Maintain immutable, tamper-resistant governance records.

Healthcare

Protect patient information while supporting compliance and operational efficiency.

Automated PII & PHII Detection: Identify sensitive information automatically during ingestion.

HIPAA-Aligned Records Lifecycle: Automate retention and lifecycle policies for clinical and administrative records.

Meet Daxy AI

Defensible AI Built Inside the Compliance Boundary

Daxy is Collabware's generative AI system designed for government and highly regulated environments, operating securely inside the compliance boundary - enabling AI-powered governance without exposing sensitive information to third-party environments.

Governed Permission-Based AI Access

Daxy only accesses information users are already authorized to view.

Compliance Reasoning

AI that understands regulations and applies compliance logic.

Agentic Workflow Automation

Automate complex processes with context-aware AI agents.

In-Boundary AI Architecture

Your data stays secure, private, and under your full control.

Built for Secure, Defensible Operations

Trusted for Regulated & Mission-Critical Environments

Built for government, healthcare, financial services, and enterprise organizations that require security, defensibility, and audit-ready governance.
